ENTERPRISE SOFTWARE / PRICING BEFORE PURCHASE

A fixed annual contract. A bounded action gateway.

ActionDock gives an existing AI agent durable document, data, research, report, and owner-approved API actions. The external agent owns the plan and sequence; ActionDock enforces credentials, destination policy, approval, and evidence.

TYPICAL ANNUAL RANGE

$12,000 - $120,000+

Indicative annual bands

Every buyer receives the exact fixed price, included software scope, limits, onboarding, security obligations, and support terms in writing before purchase.

ANNUAL CONTRACT	INDICATIVE FIXED PRICE	TYPICAL SCOPE
Core	**$12,000 - $24,000**	All seven published actions, contracted workspace and connection limits, standard onboarding, priority support, and standard security responses.
Operations	**$24,001 - $60,000**	Core scope plus expanded limits, rollout planning, quarterly service review, and expanded security documentation.
Reviewed scale	**$60,001 - $120,000+**	Contract-defined reviewed capacity, named rollout coordination, written response targets, and customer-specific security documentation and deployment review. Software remains within the published product boundaries.

What determines the quote

CONNECTION SCOPE

Number of owner-approved business API connections and workspace environments.

REPORT RETENTION

Contracted report storage, retention, and operational history requirements.

SERVICE SCOPE

Onboarding, security review, rollout coordination, and support response targets.

NO SURPRISE USAGE BILL

Enterprise is sold as a fixed annual SaaS subscription. ActionDock does not charge per action, sell usage balances or credits, transfer value, or create automatic overage invoices.

THE COMPLETE SOFTWARE CATALOG

Seven bounded actions. One control model.

All standard and Enterprise subscriptions use the same complete published catalog. Enterprise changes contracted capacity and service scope, not the product category.

ACTION	DELIVERED OUTCOME
document.analyze	Analyze supplied business text into a cited decision brief.
data.extract	Extract caller-defined fields with evidence and missing-field status.
data.validate	Apply explicit deterministic rules to a structured record.
research.web	Research a bounded public-web business question with source links.
integration.fetch	Read a permitted path on a workspace-approved HTTPS API.
integration.execute	Propose a bounded API write; signed-in owner approval is mandatory.
report.create	Create a durable Markdown or JSON report from supplied sections.

How control works

1 / AGENT ORCHESTRATES

The customer's external agent chooses each step, interprets the result, and decides when the workflow ends.

2 / POLICY ENFORCES

Credentials remain server-side. HTTPS destination, method, path, timeout, and response-size rules are enforced.

3 / OWNER APPROVES

Every external write pauses with an exact preview until a signed-in workspace owner approves that job.

Published self-service plans

PLAN	MONTHLY	ANNUAL	API CONNECTIONS	REPORT STORAGE
Launch	**$49**	**$490**	**3**	**250 MB**
Growth	**$149**	**$1,490**	**10**	**1 GB**
Scale	**$399**	**$3,990**	**30**	**3 GB**

Every plan includes all seven actions. Plans differ by connection count, report storage, monthly processing capacity, and support. At a plan boundary, affected new work pauses until reset or upgrade; there is no automatic overage charge.

PURCHASE, DELIVERY, AND PRODUCT BOUNDARIES

Clear before checkout. Controlled after activation.

ActionDock sells access to its hosted software. It does not sell provider capacity, communications delivery, human services, inventory, or an outcome performed by an undisclosed operator. Current Enterprise scope does not include unattended bulk execution, private-network connectivity, SSO, or role-based approvals.

Enterprise purchase flow

01 / SCOPE

Customer describes internal workflow, connection count, security, retention, and support requirements.

02 / QUOTE

ActionDock issues a written fixed annual price and a complete list of included limits and services.

03 / ORDER

Customer accepts the order form and completes checkout only after reviewing all terms.

04 / ACTIVATE

The workspace is activated for the contracted SaaS scope and owner-controlled connections.

Explicitly outside the product

COMMUNICATIONS AND AUDIENCE	No customer email or messaging, SMS, telephony, phone numbers, SIM or eSIM, PBX, dialers, outreach, advertising, lead generation, campaigns, or social publishing sold or performed by ActionDock; a customer may connect its own team-chat workspace for internal notifications.
MEDIA AND IDENTITY	No image, video, speech, voice, face, likeness, impersonation, deepfake, adult, or dating content generation.
PEOPLE AND REGULATED USE	No decisions, scoring, ranking, profiling, sensitive-trait inference, or categorization of people; no medical, financial, legal, government, or other regulated advice.
MONEY AND RESALE	No payment processing, money movement, marketplace inventory, provider resale, top-ups, stored value, gift cards, transferable credits, donations, crowdfunding, or automatic usage overages; a customer may connect its own billing account through a restricted key with money-movement endpoints refused.

Refund and contact

Initial payments and renewals are eligible for a full, unconditional refund when requested within 14 calendar days. No reason is required. Request a quote or refund at support@actiondock.app.
